

**WHITE PAPER**

# ABSTRACT

As cryptocurrencies transform how we trade, transact and interact online, it has become more important than ever for technology leaders to have experience with these innovations. Blockchain applications are premised on peer-to-peer engagement using shared ledgers that enable exchange of information and management of business processes across an ecosystem. Blockchain technology supports collaboration while maintaining independence. Using blockchain, one can automate a business process and select what information can be made available to specific participants in an ecosystem. For example, an organization may not wish for a customer to see improvements made in safety stock levels or cycle time as that would give them negotiating leverage and reduce the ability to reprioritize work based on demand. While blockchain can provide that visibility, an organization decides what information to share and with whom.

ToyDOGE is a charity driven token which strives to help those who cannot help themselves. Many Cryptocurrencies arrived at the moon but without a purpose, we are determined to follow in Shiba's steps

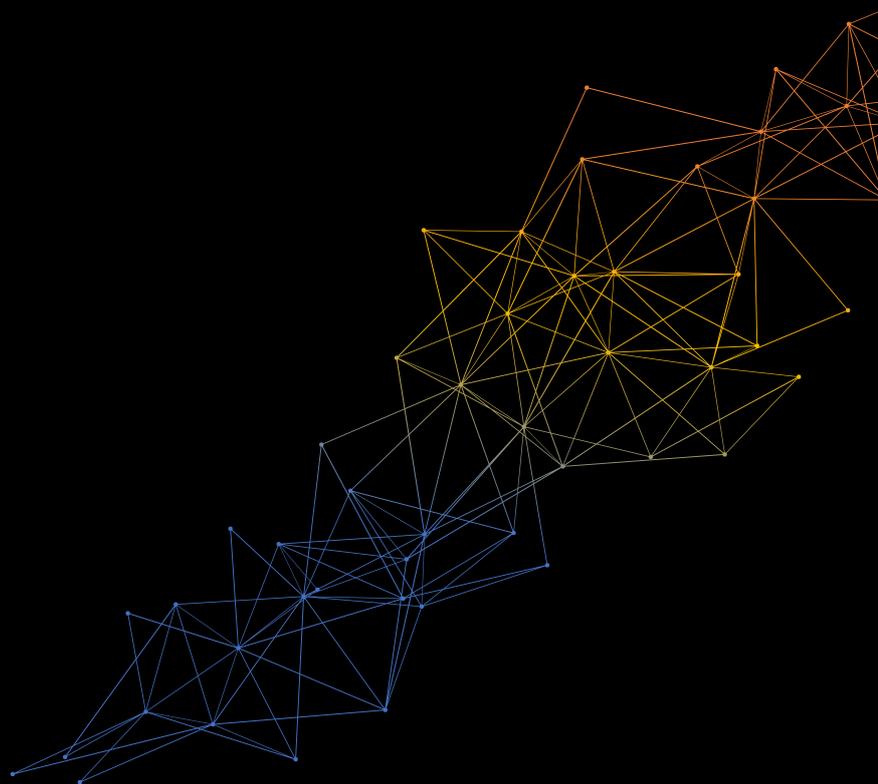

whilst putting smiles on the faces of those who are less fortunate and of course our token holders! ToyDoge is decentralized and well-liked by its lively community. We accept and support different viewpoints in order to develop ToyDOGE into the greatest crypto community. The ToyDOGE will keep contributing to achieve designed holder milestones by making marketing efforts, thus ToyDOGE is on track. Also, liquidity will be locked for two years preventing the coin from collapsing.

Furthermore, tokenomics design which incorporates transaction taxes will keep building the price floor. Charity can become more than a manifestation of the social responsibility of the cryptocurrency business. A 3% 'Marketing, Charity Fee' this will allow us to market/develop the project and allow us to put smiles on the faces of those who are less fortunate.

# INTRODUCTION

A blockchain is a list or a decentralized ledger of all transactions that take place in a peer-to-peer network. Blockchains act as a digital record of all transfers of data on a network, updated chronologically, and distributed then sealed cryptographically. In its purest form, blockchain is a digital platform that enables the recording and verification of transactions in an open and tamper- and revision-proof manner. Each block collects a batch of transactions that are timestamped to be included in the master ledger, and is identified by a unique cryptographic signature. Each block refers to the unique signature of the block in the chain before it, and therefore can be traced back to the initial block ever created in the ledger. As such, the blockchain contains an un-editable record of all the transactions ever made. Information can be fed in, but it cannot be erased. One of the important features of blockchain is the elimination of reliance on intermediaries heavily present in the current digital economy.

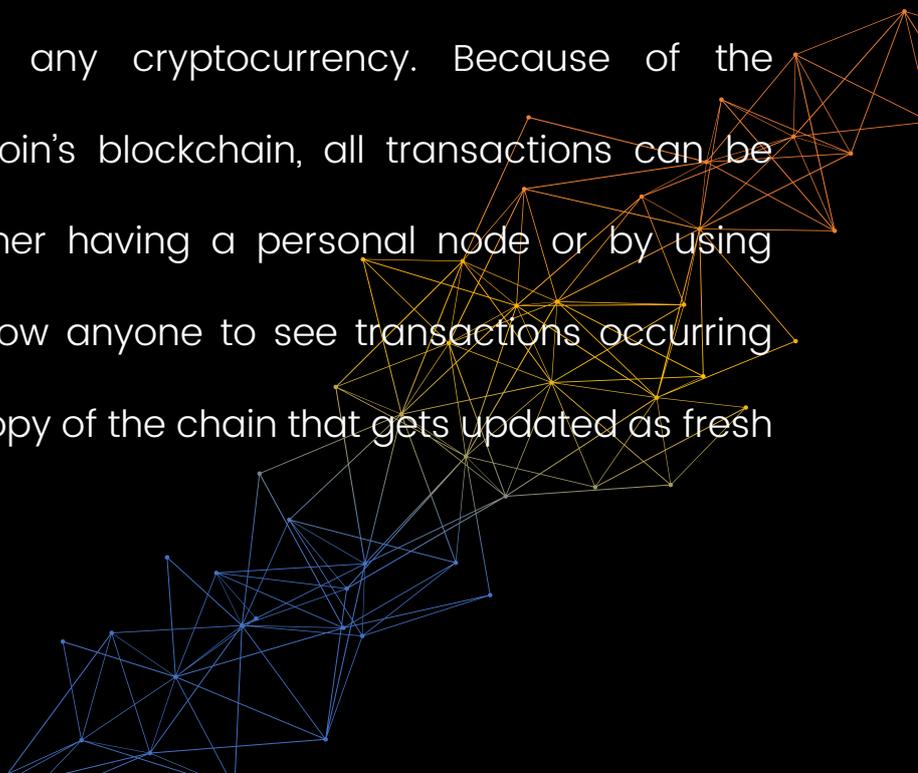

The rise of digital technologies over the past decade has brought significant disruptions to many industry sectors. Blockchain is a digital,

decentralized, public ledger used for all cryptocurrency transactions. Once each transaction is completed, it is added to previously completed blocks in the chronological order of when each block was added to the chain, forming a blockchain. Using this technology, participants can confirm transactions without a need for a central clearing authority. Integrating decentralization as a major component of the blockchain economy empowers members of complicated networks to collaborate without the necessity of the presence of centralized authority or middlemen. This helps to boost productivity in many ways, lowering transaction costs and other forms of inefficiency that exist while doing business with these agents.

A report conducted in 2018 shows that there are 28 million Blockchain wallet users worldwide, 11,290 cryptocurrency-accepting businesses at the end of 2017, 23,000 transactions per hour (on average) of Ethereum during 2018, the most of any cryptocurrency. Because of the decentralized nature of Bitcoin's blockchain, all transactions can be transparently viewed by either having a personal node or by using blockchain explorers that allow anyone to see transactions occurring live. Each node has its own copy of the chain that gets updated as fresh

blocks are confirmed and added. This means that if you wanted to, you could track Bitcoin wherever it goes.

Despite having been first designed as the infrastructure for supporting the processing and transaction of bitcoin, the world's largest digital currency, its usage has now grown well beyond that. Other uses of the technology can be built using Smart Contracts to handle digital assets in several different industries. Blockchains are viewed as having the ability to transform the global financial system and other industries by disrupting the current structure of intermediaries. A report conducted by the World Economic Forum projects that blockchain technology would alter financial services, with 10% of global GDP (about \$7.4 trillion) estimated to be kept on blockchain platforms by 2025.

Crypto currencies are virtual currencies that can be used by anyone across the world for various purchases. It is a medium of exchange using cryptography technology, so as to secure the transactions and to control the creation of additional units of the currency to stop inflation.

Crypto currencies are the future revenue stream in the digital financial world. Crypto currency addresses are established by using public and private keys. They are politically neutral as they are not bound by any rules or regulations of any specific government, exchange rates, interest

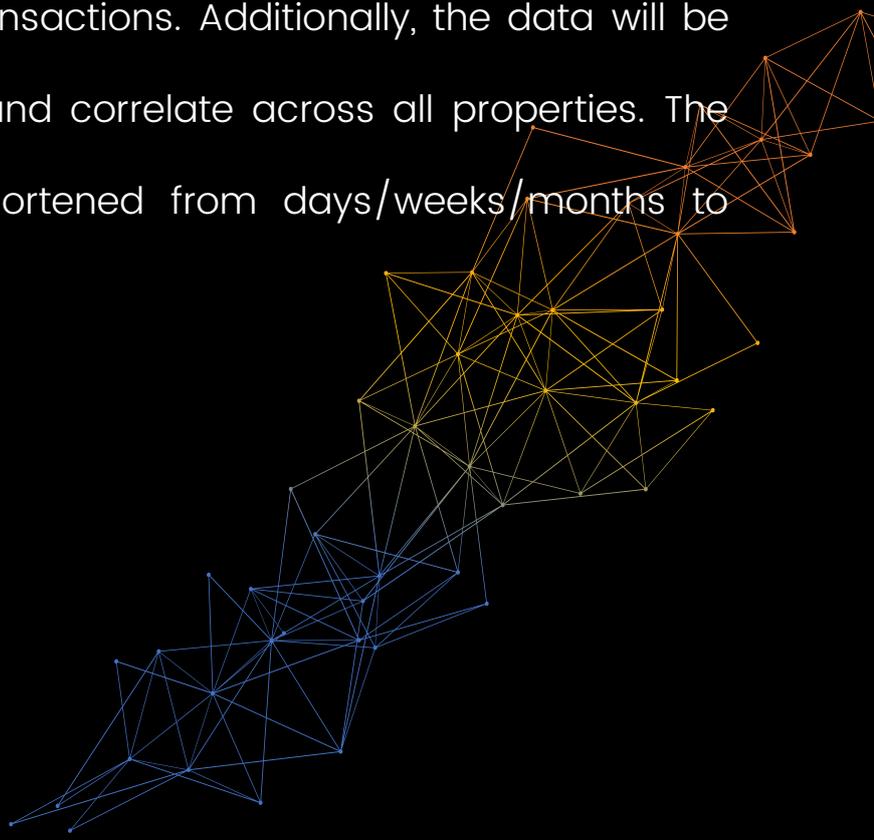

rates, and country to country transaction fee, which makes international transactions and remittances fastest and cheapest compared to any other form of payment. Crypto currency is said to be more secure than conventional financial instruments, eliminating the chances of identity theft other issues that currently plague fat based electronic payment infrastructure.

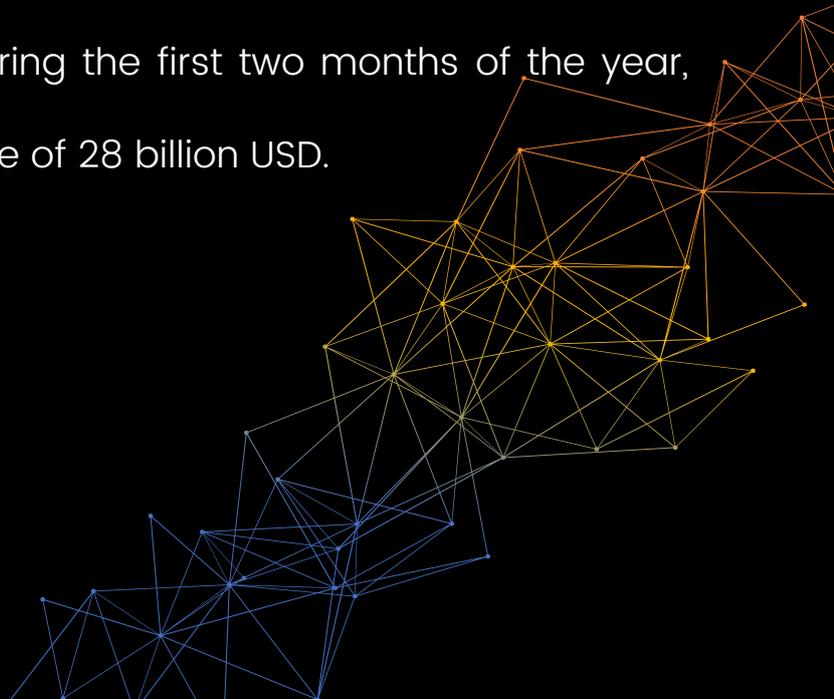

Blockchain will enable every property, everywhere, to have a corresponding digital address that contains occupancy, finance, legal, building performance, and physical attributes that conveys perpetually and maintains all historical transactions. Additionally, the data will be immediately available online and correlate across all properties. The speed to transact will be shortened from days/weeks/months to minutes or seconds.

# CRYPTOCURRENCY MARKETPLACE

Over the past year, the use of cryptocurrencies, such as crypto tokens, coins and other digital assets based on blockchain technology, has seen a period of rapid growth. Blockchain technology makes it possible for the first time to have a truly global store of value, and the number of wallets has seen a dramatic increase in the last few months. At the beginning of 2017, Bitcoin was at the top of the cryptocurrency world with a market capitalization of 12 billion US dollars. On paper, Ethereum was worth 700 million USD while it was still a relative newcomer to the cryptocurrency market. To start the year, Bitcoin's market value rose from 12 to 32 billion USD in just a matter of weeks. Ethereum also experienced an explosive rise during the first two months of the year, and as of April had a market value of 28 billion USD.

# THE JOURNEY TO \$10,000 BITCOIN

Presented by: **BLOCKCHAIN INTELLIGENCE GROUP**  
CSE:BIGG\*

It has been a breakthrough year for cryptocurrency. Bitcoin skyrocketed 10x in value, and is now primed to break the \$10k psychological barrier. Here is its journey throughout 2017.

The market is enthused by blockchain technology and the decentralization of currency that blockchain technology and cryptocurrency provide. It is estimated that well over 4000 different cryptocurrencies currently exist, and each has a new use case for blockchain being created on a near-weekly basis. Selecting the correct cryptocurrency is essential, as there are important things to consider including checking if there is anything wrong with the team, the technology, or the concept.

# INTRODUCTION TO TOYDOGE TOKEN

ToyDOGE is a charity driven token which strives to help those who cannot help themselves. Different Cryptocurrencies arrived at the moon but without a purpose, we are determined to follow in Shiba's steps whilst putting smiles on the faces of those who are less fortunate and of course our token holders. The ToyDOGE will keep contributing to achieve designed holder milestones by making marketing efforts, thus making sure ToyDOGE is on track. Also, liquidity will be locked for two years preventing the coin from collapsing. Furthermore, tokenomics design which incorporates transaction taxes will keep building the price floor.

ToyDoge is decentralized and well-liked by its lively community. We accept and support different viewpoints in order to develop ToyDoge into the greatest crypto community. Every transaction automatically contributes to the locked liquidity pool strengthening the ToyDOGE token.

ToyDOGE is a token that helps those who cannot help themselves. The ToyDOGE has decided the worldwide Toys-For-Tots, aligns with our

views on who will bring the most value out of the donations made by our holders. A 2% 'redistribution fee' for every purchase made existing holders will receive Toy Doge Tokens.

ToyDOGE is based on BSC and our contract address has been verified on BSC scan. Binance Smart Chain dual-chain architecture will empower its users to build their decentralized apps and digital assets on one blockchain and take advantage of the fast trading to exchange on the other. Binance Smart Chain is a new platform that aims to lower transaction costs and provide a space to create DApps and other DeFi products. Binance Smart Chain (BSC) is a blockchain network built for running smart contract-based applications. BSC runs in parallel with Binance's native Binance Chain (BC), which allows users to get the best of both worlds: the high transaction capacity of BC and the smart contract functionality of BSC. While it runs in parallel with BC, Binance Smart Chain is a standalone blockchain. This means that even if BC stops operating, BSC will continue to run its technical and business functions. Smart contracts, which are Ethereum-compatible, are supported by BSC. Through this feature, developers can build or migrate DApps, tools and other ecosystem components on the BSC network without much friction. The aim of the platform is to enable developers to

build decentralized applications (DApps) and help users manage their digital assets cross-chain with low latency and large capacity.

Binance Smart Chain has made immense traction in early 2021 so far partly thanks to Ethereum's congestion and gas fee issues, which has caused developers and staking investors to look for other options. The BSC community made the network even more appealing to new users as a cost-effective and stable alternative, by lowering its gas fee from 15 Gwei to 10 Gwei to counter Binance Coin (BNB)'s insane price jump to over \$300 in February.

# BENEFITS OF TOYDOGE

Cryptocurrencies, combined with blockchain technology, have positively impacted the charitable organizations around the world. A crypto token, such as the charity-oriented token, helps charities raise wealth for countless individuals who need it for their survival, health, education and well-being. Donation systems that revolve around cryptocurrencies

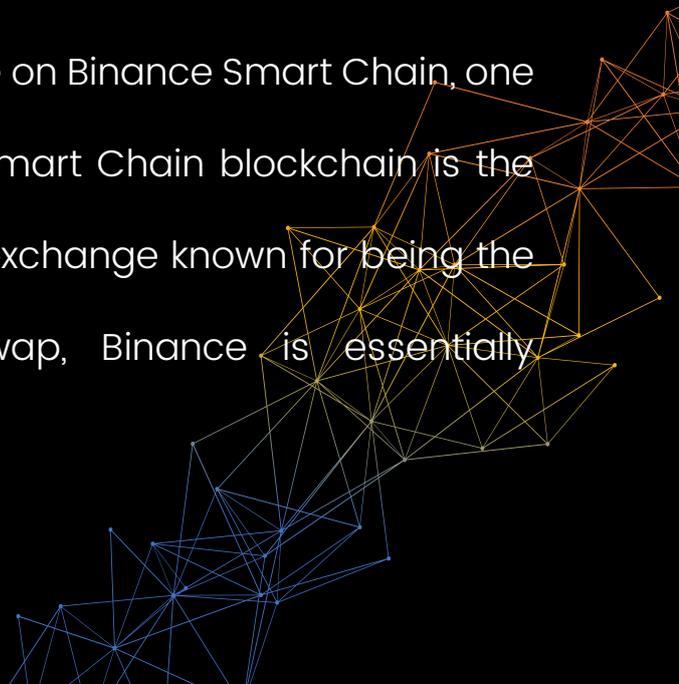

allow donors to keep a track of where their funds are going and the people that are receiving the help through the charities.

This transparency ensures that funds are being put to better uses and that support is offered to those who really need it. A charity-oriented token allows for a more decentralized approach, that generates a much higher amount of funds when compared to the conventional methods.

ToyDOGE is a token that helps those who cannot help themselves. The ToyDOGE has decided the worldwide Toys-For-Tots, aligns with our views on who will bring the most value out of the donations made by our holders. A 2% 'redistribution fee' for every purchase made existing holders will receive Toy Doge Tokens. Toy Doge provide transparency and fairness to the community. Toy doge offers benefits for everyone.

# PANCAKESWAP

PancakeSwap is a decentralized exchange on Binance Smart Chain, one of Ethereum's top competitors. Binance Smart Chain blockchain is the creation of Binance, a centralized crypto exchange known for being the largest in the world. With PancakeSwap, Binance is essentially

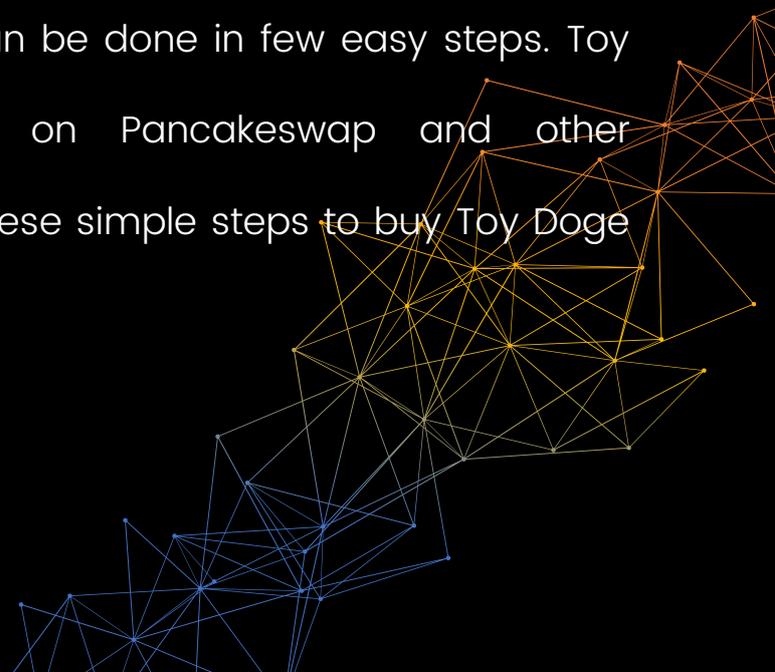

competing against two distinct cryptocurrency establishments of Ethereum and Uniswap.

The intrigue gets even deeper because PancakeSwap can outshine Binance itself if exchange volume gets deep enough. However, cryptocurrency narratives aside, PancakeSwap is one of today's largest DeFi protocols. PancakeSwap uses an automated market maker (AMM) model. That means that while you can trade digital assets on the platform, there isn't an order book where you're matched with someone else. Instead, you trade against a liquidity pool. Those pools are filled with other users' funds. They deposit them into the pool, receiving liquidity provider (or LP) tokens in return. They can use those tokens to reclaim their share, plus a portion of the trading fees.

## BUYING TOYDOGE

Buying Toy Doge is simple and it can be done in few easy steps. Toy Doge has already been listed on Pancakeswap and other cryptocurrency exchanges. Follow these simple steps to buy Toy Doge tokens

## Download & Setup Wallet

You're going to need a wallet first and foremost! [metamask.io/](https://metamask.io/) offers the most popular and functional option on the market, all available in a browser extension.

## Buy and Send BNB To Wallet

Head to [trustwallet.com/](https://trustwallet.com/) which should provide you the opportunity to buy some Smart Chain BNB. Send that to your Metamask wallet, and you're ready to trade on Binance Smart Chain.

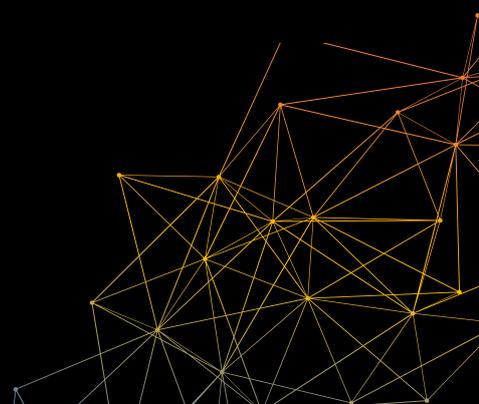

## Swap the TOYDOGE on Pancakeswap

Head to [exchange.pancakeswap.finance/](https://exchange.pancakeswap.finance/) and click on "Connect or Unlock Wallet" at the top right corner to connect your Metamask wallet. Follow the prompts and allow PancakeSwap to view your accounts and addresses.

## ADDRESS OF TOYDOGE

Click on "Select a currency" above where it currently say "Enter an amount" and paste in the token contract address: Address of ToyDOGE.

Press the settings button that you see at the top right corner of the center panel. Adjust slippage to 12% to account for ToyDoge tokenomics. (In case the volume is high, you can increase the slippage in order to confirm your transaction!)

# TOKENOMICS

ToyDOGE taxes a total of 10% on every transaction which goes is subdivided into three parts:

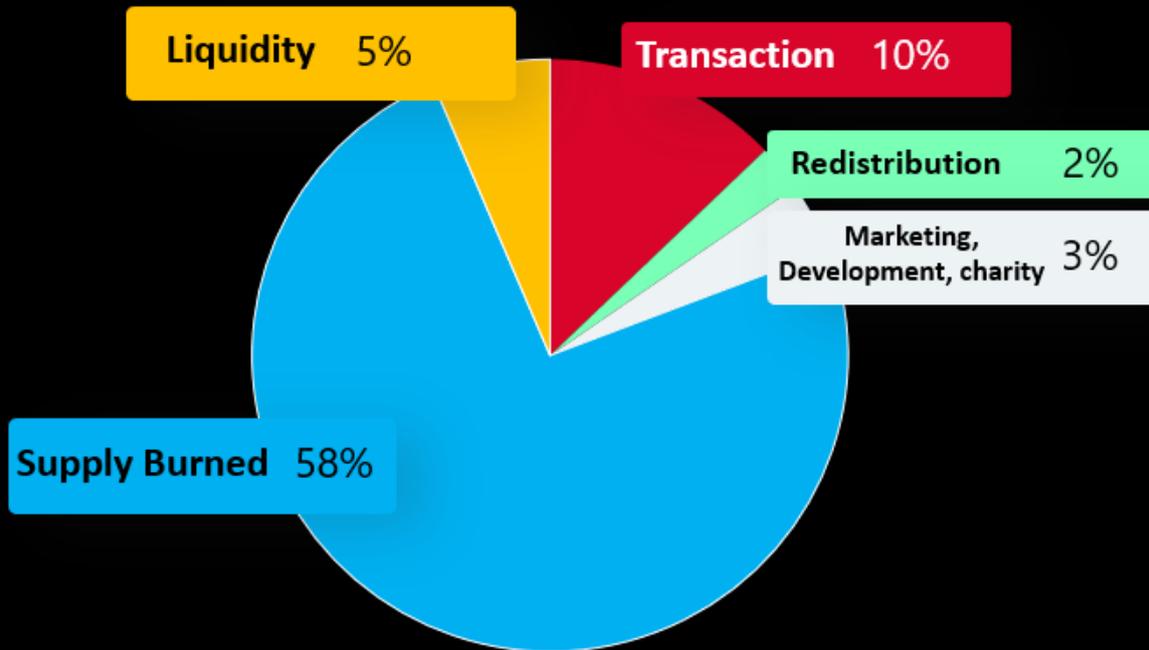

A 3% 'Marketing, Charity Fee' this will allow us to market/ develop the project and allow us to put smiles on the faces of those who are less fortunate. Proof of charitable donations will be provided in our Telegram chat.

A 5% 'Liquidity pool fee' to add more liquidity to the pool on pancake swap v2.

A 2% 'redistribution fee' for every purchase made existing holders will receive Toy Doge Tokens.

- Original supply: 1,000,000,000,000,000
- 10% Tax on transaction
- 2% Redistribution to holders
- 3% Marketing, Development, Charity
- 58% Supply Burned
- 5% To liquidity
- 420,000,000,000,000 circulating supply

# ROADMAP

## ROADMAP

### Launch From Earth

- ToyDoge Meme Development
- Community Marketing & Social Media Engagement
- PancakeSwap Fair Launch
- Trust Wallet Logo Update and Token Value Showing
- CoinGeko Listing Engagement
- First Toys-For-Tots Donation Series
- First Salvation Army Donation Series

### Moon Market Cap 1,000,000

- CoinMarketCap Listing
- Second Toys-For-Tots Donation Series
- ToyDoge Lottery System First \$1,000 giveaway for 1,000,000 market cap
- Community Marketing and Media Blitz
- Twitch Gamers Outreach
- Second Salvation Army Donation Series

### Mars Market Cap 10,000,000

- ToyDoge BNB Merchandise Line
- Tier 1 Exchange Listings
- CoinWorld Listing
- BitTok Listing
- First Mega Lottery Drawing with a \$10,000 giveaway for 10,000,000 market cap

### Jupiter 10000 holders

- Launch Mobile Wallet App
- Community Based Votes for 3. Tier 1 Exchange Listings
- Rank 150+ CMC Partnerships
- Rank 175+ BitTok Partnerships
- Gaming Platform Partnerships
- Implementing ToyDoge on multiple NFT platforms
- ToyDOGE Official STORE website to make purchases
- 8. Community Based Votes for Future Initiatives First Series

# KEY FEATURES OF TOYDOGE

Some key features of ToyDOGE are:

- Secured and safe: ToyDOGE leverages a distributed peer-to-peer consensus network that cryptographically helps in securing every transaction.
- Quick transfer: Instant fund transfer globally is available with the help of fast block execution unlike traditional remittance, unmatched speed, and payment processors.
- Decentralized: Direct transactions among network participants without the presence of a central facilitator are enabled with the help of decentralized technology.
- Easy to use: User-friendly interface intended for seamless Real-world use cases.
- Scalability: Assures scalability for pacing up with the industry's transaction requirements, thereby facilitating mass adoption of cryptocurrency.

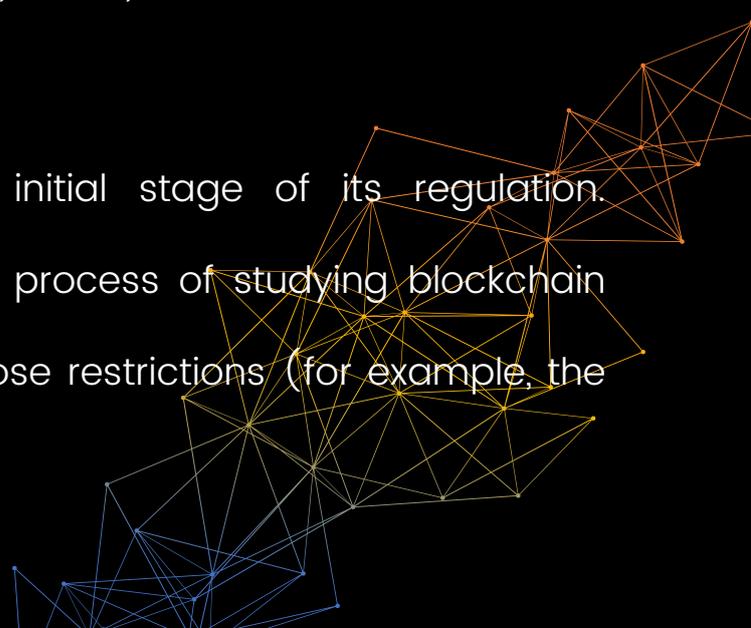

# RISKS

ToyDOGE provides a lot of benefits to the investors, but on the other hand, it is not out of risk. At Toy Doge, our team believes that we should be transparent and declare the potential risks involved in Toy Doge.

Like any other crypto coin out there in the market, Toy Doge is also volatile. We cannot control it. The market value of Toy Doge solely depends upon the number of people who buy it or sell it. As of now, Toy Doge cannot be mined or earned any other way than bought., it has to see a lot of improvement in the coming days.

The market value of Toy Doge may be highly volatile at the start, but we can guarantee that it will become stable over time. We don't want it to be unstable. We don't want it to be the next USDT either, with no volatility. Besides these risks, if one is an expert in trading crypto or using it, they can time the market, buy the Toy Doge, hold it, wait till its value becomes high, and sell it.

The blockchain industry is in the initial stage of its regulation. Governments of countries are in the process of studying blockchain technology, and some countries impose restrictions (for example, the

United States, China, South Korea). No legal documents are regulating the crypto industry yet – the laws can appear later and can significantly affect the activities of blockchain projects, including our project. We warn you that such laws can significantly limit and even stop the project activity, we are not responsible for the negative consequences associated with the possible regulation of the industry in the future.
